## Major Brazilian Water Utility Selects Itron to Decrease Non-Revenue Water and Offer Enhanced Service for C&I Customers

*Departamento Municipal de Água e Esgotos to benefit from Itron technology to monitor C&I customers*

LIBERTY LAKE, Wash.--(BUSINESS WIRE)-- Itron, Inc. (NASDAQ: ITRI), a world-leading technology and services company dedicated to the resourceful use of energy and water, announced today that Departamento Municipal de Água e Esgotos (DMAE), water provider to 1.5 million residents in Porto Alegre, Brazil, has signed a contract with Itron. DMAE will take advantage of Itron's managed services offering to run, manage and maintain Itron's commercial & industrial (C&I) water monitoring solution, including 3,000 WaterMind supervision analyzers. The solution will help the utility improve the efficiency of its operations and reduce non-revenue water.

Itron's team of experts will operate the monitoring solution, which turns meter information into intelligence that DMAE can use to protect its revenue, improve operational efficiency and enhance the satisfaction level of C&I customers. The solution remotely monitors the daily consumption patterns of C&I customers and immediately detects events such as leaks, meter blockages, backflow, excessive consumption or significant pressure drop. The project will start by automating the process of reading DMAE meters. As a part of the contract, Itron will manage the solution for five years, including two years of installation.

"Itron water monitoring offers an advanced, yet simple way to obtain the data that will help DMAE protect its revenue and manage water more intelligently, while encouraging large consumers to be wiser about their use," said Samuel Lee, Itron vice president of sales, marketing and solutions for Water in Latin America. "With greater intelligence comes greater ability to effectively manage water resources. This is how our technology and services are helping DMAE create a more resourceful world."

### About Itron

Itron is a world-leading technology and services company dedicated to the resourceful use of energy and water. We provide comprehensive solutions that measure, manage and analyze energy and water. Our broad product portfolio includes electricity, gas, water and thermal energy measurement devices and control technology; communications systems; software; as well as managed and consulting services.
