

## **Itron Selected to Provide Advanced Metering Solution to Major Indonesian Water Utility**

*Electromagnetic technology will help the City of Malang better manage water supply*

LIBERTY LAKE, Wash. & MALANG, Indonesia--(BUSINESS WIRE)-- Itron, Inc. (NASDAQ:ITRI) announced today that the City of Malang's water utility, Perusahaan Daerah Air Minum Kota Malang (PDAM), in East Java, Indonesia selected Itron's commercial and industrial advanced metering infrastructure to effectively monitor its distribution network and improve water resource management. The solution will help PDAM Malang reduce non-revenue water through real-time data logging and pressure detection on each meter. The implementation of the system is scheduled to be completed in May 2012.

PDAM Malang is a leading water utility in East Java, Indonesia, serving more than 800,000 people in a major urban area. Itron is providing an end-to-end solution that will monitor PDAM Malang's distribution network at 39 district metering points to help identify potential areas of unusual consumption and network losses using enhanced leak detection capabilities, real-time consumption data and text message alerts. The solution will also help prevent clogging problems from particles in the water that could potentially stop meters from running properly. The system to be deployed is based on IP-68, battery-powered, electromagnetic metering technology, particularly suited to the region's tough environmental conditions.

"We selected Itron's comprehensive solution because it ensures our investment is maximized. Itron provides high-quality products, reliable support and a low-maintenance system," said Mr. Teguh Cahyono, technical director, PDAM Malang. "It is critical for PDAM Malang to be able to monitor consumption and flow rate accurately, especially in areas power supply is not available. Itron's battery-powered technology delivers what we need; where we need it," added Cahyono.

Since 2009, PDAM Malang has been an Itron Indonesia customer who values Itron's strong local presence, and reliable training and support services. With this new project, Itron's dedicated, regional team will continue to provide unparalleled services.

"We're honored that the company's confidence in Itron's solutions is expanding our relationship," said Gavin Van Tonder, Itron vice president of water marketing. "Significant projects for utilities like PDAM Malang continue to demonstrate that Itron delivers complete solutions that help utilities make smarter decisions about managing water and energy resources," Van Tonder added.

### **About Itron**

Itron is the leading provider of energy and water resource management solutions for nearly 8,000 utilities around the world. We offer end-to-end solutions that include electricity, gas, water, and heat measurement and control technology; communications systems; software; and professional services. With more than 9,000 employees doing business in more than 130 countries, Itron empowers utilities to responsibly and efficiently manage energy and water resources.
